

ARC Preconfiguration

System Configuration & Custom View Design

- Accelerate adoption with preconfiguration services designed for you.
- AutoPilot® Custom Views are tailored to your station's unique requirements.
- Jet™ Active Flowcharts provide automated site control.

Accelerated Deployment
Monitor broadcast equipment with greater speed and less effort.

Expert Engineering Services
Take advantage of Burk's in-house product experts.

Increased Engineering Efficiency
Drive business results with reduced engineering effort.

Optimize Your System Design

Burk's product experts will help you design the best architecture for your remote control system. Get the visibility and control you need to manage your entire broadcast environment.

Get Running Faster

Preconfigured systems mean reduced deployment time. Services include configuration of ARC Plus and ARC Solo remote control units, creation of AutoPilot® Custom Views and system automation setup using Jet™ Active Flowcharts.

Get the Burk Advantage

Knowledge is Power

Email or text alerts provide instant notification of equipment failures or off-air events. Up-to-the-second status lets you decide whether to drop everything and head to the site in the middle of the night or let it wait for the next scheduled service visit. Save money and sleep soundly.

Automation Keeps You On the Air

Jet Active Flowcharts make the decisions and take the actions you specify. Automatically switch to a backup system or control a directional antenna array. Maximize uptime and eliminate repetitive tasks.

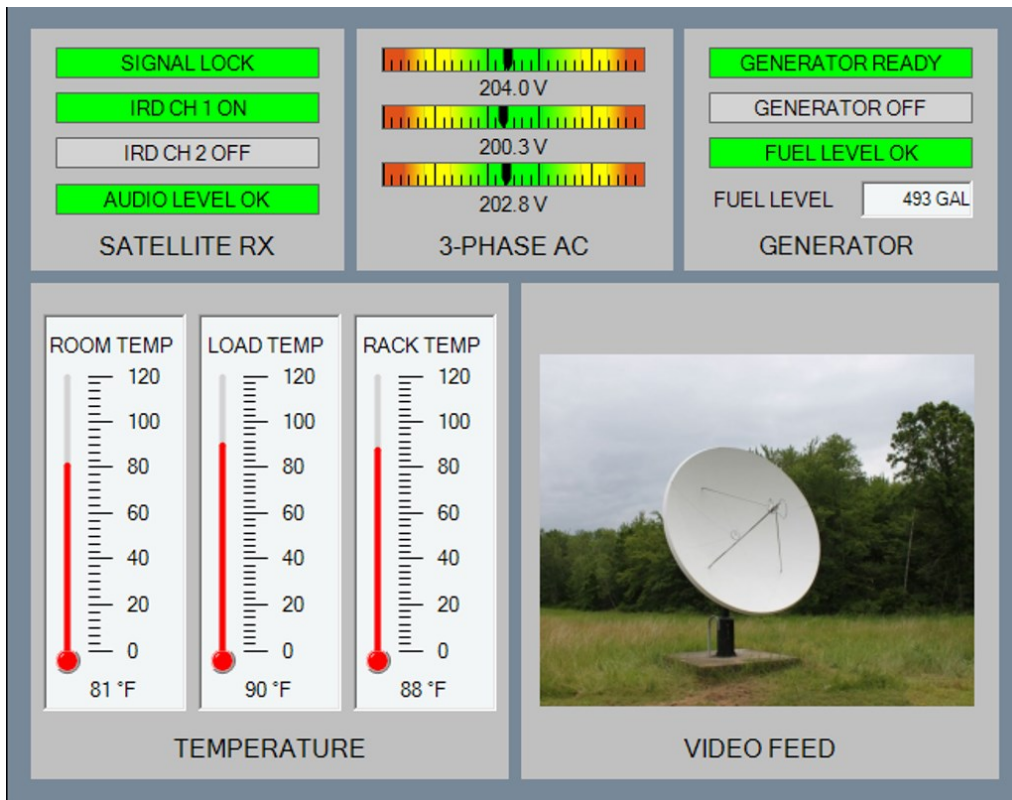

Assure compliance

Automated logging and reporting of critical parameters for the transmitter and tower lights demonstrate FCC and FAA compliance.

Identify Performance Trends

Long-term variations in logged data help to define the scheduled maintenance plan. Early warning thresholds on key parameters identify equipment degradations before failures occur.

Customization

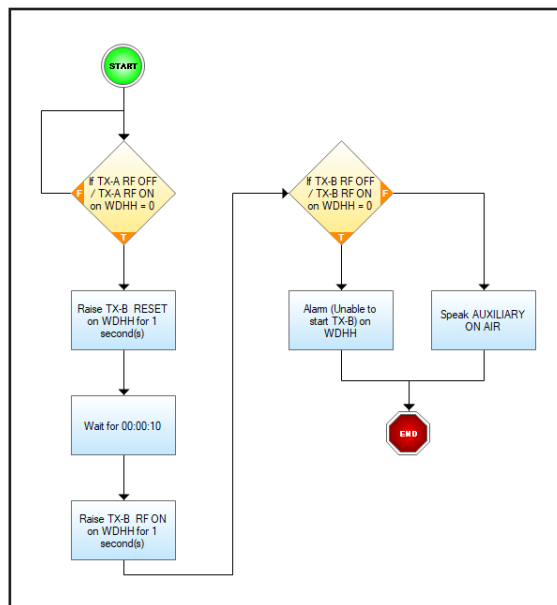

Tailor your remote control architecture to meet your station's unique requirements.

AutoPilot custom views highlight the information most important to your managers and engineering staff.

Jet™ Active Flowcharts automate site control using an easy-to-read graphical format that is intuitive and natural.

Contact the factory or your Burk dealer for more information on customizing your ARC Plus or ARC Solo configuration.

About Burk Technology
Burk Technology designs and manufactures high quality transmitter facility control systems for the broadcast industry, with thousands of active radio and TV installations across the US and around the world.

Founded in 1985, Burk brings over 30 years of innovation and continuous improvement to transmitter remote control, setting the standards for reliability, flexibility and ease of operation.

ARC Preconfiguration

Part Number	Description
ARC PRECONFIGURATION	Preconfiguration Service Package includes configuration of one ARC Plus or ARC Solo with monitoring and control points, automatic functions, alarm notification setup, periodic log capture and distribution, and AutoPilot custom view. On-site work is not included.

Specifications subject to change without notice.
